

15/5/2008 Smoke Watch

As you can see from the map and the 1st photo the smoke from these two private forest high intensity burns in N/E Tas (2 green dots) travelled from the East towards us at Grindelwald on a clear blue sky day. It never went straight up as they claim. In the 2nd photo you can see how low and thick the smoke was, turning day into night. The smell was so bad I needed my respirator mask on because the smoke went right through the house.
