

Smoke Watch 25.9.2011

Tue Sep 27, 2011 5:05 pm

More than not there was a strong smell of smoke in the air.

It started seeping into the house.

The wind had changed from S/E the previous day to N this day.

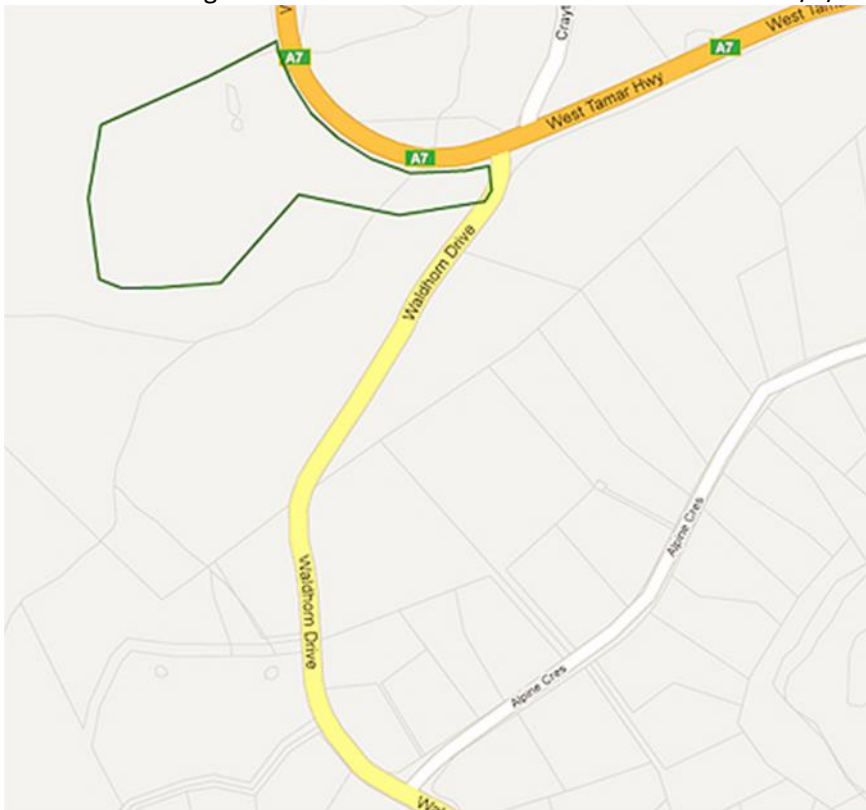

The smoke would come and go and catch me by surprise at times. Obviously the wind was changing direction throughout the day. I had jobs to do and I would try and wear a respirator mask for as long as I could.

Late in the afternoon when the smoke lessened I photographed where it was coming from. You can see it was coming from 2 Waldhorn Drive, Grindelwald and was heading straight up the escarpment to our property. Grindelwald is in the West Tamar Council.

Conditions were not right for burning. It just made smoke. In the 2nd picture it shows just what failed to burn.

There appears to have been no fire permit for this burn, but with or without, conditions do apply.

I am still suffering the effects of harmful nuisance smoke on the 27/9/2011.

We were on the end of this thoughtless action. The smoke was even fading by now.

This is what was smoking and didn't burn. Picture taken when the smoke had stopped.
