

Smoke Watch 7&8th.4.2013

Posted Wed Apr 17, 2013 10:13 pm

Late afternoon on the 7/4, I noticed when I was coming in from outside I was having trouble breathing.

As I got worse I said to my wife, "There is smoke about."

Actually I got ill quite quickly and immediately commenced prescription treatment.

Looking from Grindelwald in a northerly direction I could see the Tamar valley and beyond was covered generally in smoke.

From what I could see there were not any burns of any magnitude being conducted upwind of us.

The smoke appeared to be coming from the mainland.

Thank you for looking into the reason for poor air quality in our area at that time.

It has taken me this long to feel well enough to write.

Complaint lodged with incidentresponse@environment.tas.gov.au and acknowledged
