

21 & 23.9.2010 Smoke Watch

Planned burns near Mt Barrow.

Notice how the smoke hugged the ground.

See how the smoke completely changed direction over 2 days and moved towards Launceston....and it looks like they just lit a fresh one.

So many people would have been affected by these unnecessary acts.

Just goes to show planned burns can't be controlled and they shouldn't be allowed.

There are smokeless methods they could use.

Smoke heading one way
